Internet Hotspot Solutions for Motels and Hotels

Guest Internet
WI-FI HOTSPOTS MADE EASY

- **Low cost Internet gateways that are simple to install**

- **Plug and play: the easy to use wizard speeds installation**

- **Custom login page with client branding, choose from 12 backdrops or create your own design**

- **Protect against lawsuits with the built-in disclaimer; the legal disclaimer can be edited**

- **Authenticated access uses codes that are generated and managed on the unit; no external RADIUS server is required**

- **A firewall protects the business network providing PCI DSS compliance**

- **Master bandwidth control, and individual bandwidth settings for each code**

- **Content filtering ensures a family friendly Internet service by blocking adult web sites**

- **Monitor Internet utilization through comprehensive reports**

- **Access code API for PoS and PMS applications**

- **Remote access and configuration**

- **Configuration backup and restore**

All motels and hotels provide wireless Internet access as part of a package of essential guest services. While some hotels and resorts charge guests extra for the Internet service, most motels and hotels offer free WiFi Internet for guests to use their smart-phones, laptops and iPads.

Most motel and hotel owners give free WiFi Internet but see the service as an unavoidable expense. However by installing a Guest Internet gateway the Internet can become a business advantage. GIS gateways prevent abuse by controlling data speeds and by filtering Internet content. The most important GIS feature is the ability to block peer-to-peer connections and prevent guests sharing copyrighted music and video files.

Protect you business from Internet dangers: prevent guests sharing copyrighted files to ensure you don't get tangled in a lawsuit.

Many motel and hotel owners have already received letters from attorneys because a hotel guest was identified sharing a copyrighted file.

Pay-per-view is a service where motels and hotels can recover some income that was lost to the Internet. Many guests download videos from Netflix using the WiFi Hotspot, rather than use the hotel pay-per-view service. A GIS gateway can be used to block sites such as Netflix and Hulu, preventing guests from using these subscription services.

You can also increase page views of the business Website using the Guest Internet custom login page feature.
